im afraid the driver will never be sorted flick: the real reason was the API of the new wifi driver was not known when they made the device driver. lspci -k | grep -A2 Network: 01:00.0 Network controller: Broadcom Corporation BCM4311 802.11b/g/n 02:00.0 Network controller: Broadcom Corporation BCM4311 802.11b/g/n 03:00.0 Network controller: Broadcom Corporation BCM4311 802.11b/g/n 04:00.0 Network controller: Broadcom Corporation BCM4312 802.11b/g/n The second driver was released two days ago alkisg: you need to install bcmwl-kernel-source. b43 is ancient. ducasse: it's not installed ducasse: says that the driver from that post is installed by default (it's a really old post, I think it was like 2 years ago) And the post says "You

should see your wireless interface named wlx..." But here I see wlp4s0... alkisg: the package is called bcmwl-kernel-source and it might have installed bcmwl-kernel-source-modaliases too. it's possible the udev rules are not set correctly. Hmm ducasse: and you're saying that the network manager should do all that automatically, but it doesn't... so this isn't an issue with ubuntu, but with the b43 firmware? (now I'm scared because I'm thinking of installing bcmwl-kernel- 82157476af
